C;Function:
A;Description: catalyzes hydrolysis of one molecule ATP coupled
es such as the sarcoplasmic or endoplasmic reticulum; Ca2+ pump
A;Pathway: oxidative phosphorylation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

```
Ca2+-transporting ATPase (EC 3.6.3.8) 2, sarcoplasmic/endoplasmic reticulum - pig
N;Alternate names: Ca2+-transporting ATPase isoform 2b; calcium pump; sarcoplasmic/endo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A; Molecule type: mRNA
A; Residues: 1-1042 < EEG3.

C;Comment: This magnesium-dependent, membrane-bound enzyme catalyzes the hydrolysis of P
witch skeletal muscle sarcoplasmic reticulum; the slow twitch enzyme is low in activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11;

LOW CALCIUM CONCENTRATIONS: DEPHOSPHORY IN THIS IN THE LIGHT OF THE ATPASE FOR CALCIUM. THIS INHIBITION IS RECULATED BY THE PHOSPHORYLATED PLAN DECREASES THE APPARENT AFFINITY OF THE ATPASE FOR CALCIUM. THIS INHIBITION IS RECULATED BY THE PHOSPHOLAMBAN (PLN) (BY SIMILARITY).

-!- SUBUNIT: ASSOCIATED WITH PHOSPHOLAMBAN (PLN) (BY SIMILARITY).

-!- SUBUNIT: ASSOCIATED WITH PHOSPHOLAMBAN PROTEIN. SARCOPLASMIC AND ENDOPLASMIC RETICULUM.

-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS, SERCAZA/ATPZAZA/CLASS 1/HKZ AND SERCAZB/ATPZAZA/CLASS 2-4/HK1 (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING. SERCAZ TRANSCRIPTS DIFFER ONLY IN THEIR 3-UTR REGION AND ARE EXPRESSED IN A TISSUB-SPECIFIC ISOFORM AND SERCAZB IS A CARDIAC/SLOW TWITCH, MUSCLE SPECIFIC ISOFORM AND SERCAZB IS A UBIQUITOUS HOUSEKEEPING ISOFORM. SERCAZA HAS A LOWER AFFINITY FOR CALCIUM AND A HIGHER CATALYTIC TURNOVER RATE.

-!- TISSUE SPECIFICITY: ISOFORM SERCAZB IS HIGHLY BARRY AND SLOW TWITCH SKELETAL MUSCLE. ISOFORM SERCAZB IS WIDELY EXPRESSED IN HEART SKIN EXPENSED. IN SMOOTH MUSCLE. TISSUES SUCH AS IN ADULT SKIN EXPERSED.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. DD IS AN AUTOSOWAL DOMINANTLY INHERITED SKIN DISORDER CHARACTERIZED BY LOSS OF ADDESION BETWEEN EPIDERMAL CELLS (ACANTHOLYSIS) AND ABNORMAL KERATINIZATION. PATIENTS WITH MILD DISEASE MAY HAVE NO MORE THAN A FEW SCATTERED KERATOTIC PAPULISS OR SUBTLE NAIL CHANGES, WHEREAS THOSE WITH SEVERE DISEASE ARE HANDITARS, NEIGROPS WHORDS, WERRATOTIC PLAQUES. IN A FEW FAMILIES, NEIGROPSYCHIATRIC ABNORMALITIES SUCH AS MILD MENTAL RETARDATION, SCHIZOPHRENIA,

**ENDOPLASMIC RETICULUM.

ALTERNATIVE PRODUCTS: 2 ISOFORMS; SERCA2A/ATP2A2A AND
SERCA2B/ATP2A2B (SHOWN HRRE); ARE PRODUCED BY ALTERNATIVE SPLICING
IN A TISSUE-SPECIFIC MANNER.

TISSUE SPECIFICITY: ISOFORM SERCA2A IS HIGHLY EXPRESSED IN HEART
AND SLOW TWITCH SKELETAL MUSCLE. ISOFORM SERCA2B IS WIDELY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CYTOPLASMIC (BY SIMILARITY).

"Structure and organization of the mouse Atp2a2 gene encoding the sarco(endo)plasmic reticulum (a (2+)-ATPase 2 (SERCA2) isoforms.";
Mamm. Genome 11:159-163(2000)
-!- FUNCTION: THIS MAGNESIUM DEPENDENT ENZYME CATALYZES THE HYDROLYSIS OF ATP COUPLED WITH THE TRANSLOCATION OF CALCIUM FROM THE CYTOSOL IO THE SARCOPLASMIC RETICULUM LUMEN. ISOFORM SERCAZA IS INVOLVED IN THE REGULATION OF THE CONTRACTION/RELAXATION CYCLE (BY SIMILARITY)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ENZYME REGULATION: REVERSIBLY INHIBITED BY PHOSPHOLAMBAN (PLN) AT LOW CONCENTRATIONS. DEPHOSPHORYLATED PLN DECREASES THE APPARENT AFFINITY OF THE ATPASE FOR CALCIUM. THIS INHIBITION IS REGULATED BY THE PHOSPHORYLATION OF PLN (BY SIMILARITY). SUBUNIT: ASSOCIATED WITH PHOSPHOLAMBAN (PLN) (BY SIMILARITY). SUBGULIALE ROCATION: INTEGRAL MEMBRANE PROTEIN. SARCOPLASMIC AND ALTERNATIVE PRODUCTS: 2 ISOFORMS; SERCAZA/ATPZAZA AND SERCAZA/ATPZAZA AND SERCAZA/ATPZAZA (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING IN A TISSUE-SPECIFIC MANNER.

Proc. Natl. Acad. Sci. U.S.A. 93:284-289(1996).
-!- FUNCTION: PROTON-COUPLED INTAKE OF OLIGOPEPTIDES OF 2 TAMINO ACIDS WITH A PREFERENCE FOR DIPEPTIDES.
-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: BELONGS TO THE PTR2 FAMILY OF TRANSPORTERS.
                                                                                                                                                                                                                                                                   3.9%; Score 96; DB 1; Length 500; 22.8%; Pred.
